

- 算法思路：利用列表遍历
- LeetCode运行结果：

Runtime: **44 ms**, faster than **85.74%** of Python3 online submissions for Two Sum.

Memory Usage: **14.3 MB**, less than **75.08%** of Python3 online submissions for Two Sum.

- 运行代码：

```
class Solution:
    def twoSum(self, nums: List[int], target: int) -> List[int]:
        for i in range(len(nums)):
            pre = nums[i]
            res = nums[i+1:]
            if (target - pre) in res:
                return [i, res.index(target - pre) + i + 1]
```
